**Venture Construction Group of Florida assists Martin County property owners with rebuilding after hailstorm**

*Preferred National Storm Damage Center contractor provides hail and wind damage repairs to numerous homes and businesses*

**Stuart, Fla.** – Venture Construction Group of Florida, local leader in storm damage repairs and restoration, provides free assessments to residential and commercial property owners throughout Martin County, Stuart, Palm City, Okeechobee, Port Salerno, and Hobe Sound. The hailstorm that swept through the Treasure Coast on April 27, 2015, left many homes and businesses with extensive hail and wind damage.

According to Florida Climate Center's office of the state climatologist, Florida has numerous thunderstorms, but not that many instances of hail due to the freezing level in a Florida thunderstorm being so high that hail often melts before it reaches the ground. Even though hail is not common to the state, there have been about a dozen events of hail of over 3 inches reported in Florida. The recent storm in Stuart and throughout Martin County resulted in golf and tennis-ball sized hail, leaving numerous properties with extreme damage.

As a nationally recognized industry leader in storm damage repairs and restoration work, the Venture Construction Group of Florida Storm Damage Restoration, Repair & Consulting Process provides residential and commercial property owners with free property inspections, skilled assessments to determine if damage is present and scope of repairs needed. If storm damage is detected, their HAAG Engineering certified inspectors provide top-notch hail and wind damage repairs and restoration work. The team has found extensive damage to roofing, siding, gutters, pool enclosures, screened porches, and exteriors to numerous homes and businesses throughout Martin County.

"Many property owners simply aren't aware of hail and wind damage, how to get a proper assessment from a certified construction company, and how to mitigate future damage," says Steve Shanton, president and founder of Venture Construction Group of Florida.

Hail damage may not be immediately apparent or visible after a severe thunderstorm, hail, or windstorm; making it extremely important to have a certified inspection after major storms. Leaks may not occur immediately after the storm, but can potentially wreak havoc in the future, including deterioration, premature aging, and weakened roofing structures and exteriors susceptible to further damage in the event of future storms and hurricanes.

"Most people think hurricanes cause more damage than hailstorms, but the truth is that it doesn't take much of a hailstorm to cause severe property damage from bruising, cracking, and denting which can void the manufacturer's warranty," says Steve Shanton, president and founder of Venture Construction Group of Florida.

Many property owners are unaware of what steps to take to determine if they have hail damage and what to do to fix them, as hail is so uncommon in Florida. For a free property inspection, please call 866-459-8351. Venture Construction Group of Florida is holding a *Hurricane & Storm Damage Preparedness* seminar on August 4, 2015 from 4 – 7:30 p.m. at the Hutchinson Island Marriot Beach Resort & Marina to help educate and inform the community. The seminar will feature speakers from a variety of nationally recognized companies as well as local leaders in construction, insurance restoration and storm damage repairs. The seminar is open to homeowners, property owners, and property management companies. Please call 866-459-8351 to RSVP.
